**Hiring Manager**

**Wave Mobile Money**

Dear Hiring Manager,

I am a student studying Software Engineering and I am passionate about using technology to positively impact the lives of people across Africa. I am excited by Wave Mobile Money's mission to make financial products accessible and affordable and I would be excited to work towards fulfilling that vision.

I have experience in languages like Java, Python, and JavaScript and have worked with frameworks like Django, and Git. One of my projects was Rent Pay, a Django based rental management web application, and for another project I created a Student Registration System using Java Swing, and a MySQL database. I learned so much through these projects, related to web development, teamwork, and problem solving.

I am especially impressed with Wave's commitment to innovation and inclusivity in fintech. I am excited to leverage my technical skills and interest in software development and learn and grow with your team.

Thank you for considering my application. I look forward to the opportunity to contribute to Wave's mission to create a safe and inclusive financial network for all.

Sincerely,

Alex Mwangi
